## Environmental Policy

SIPA SpA considers environmental protection and sustainable development to be fundamental and strategic factors in conducting and developing its business.

This commitment is clearly revealed:

- In enforcement of the legal requirements and regulations applicable to the company's business, and meeting compliance obligations;
- In ongoing improvement of the Environmental Management System in compliance with the ISO 14001 standard to improve the company's environmental performance;

- In the objectives of industrial processes involved in operations that have an impact on the environment, concerned with the design and construction of machines and moulds for the production, filling and packaging of plastic containers;
- Throughout the entire life cycle of the product and of customer service;
- In all the phases in which SIPA SpA can exercise control or influence with the aim of preventing any form of pollution and reducing environmental impact to an absolute minimum;
- In maintaining environmental protection and compliance with the applicable laws, a fundamental element of the company's Organisational and Management Model (OMM) in line with the provisions of Legislative Decree 231/01 and subsequent amendments;
- In meeting the requirements of the "Sustainable Development Goals (No. 12 "Responsible consumption and production ", No. 13 "Climate action ") as defined by the United Nations 2030 Agenda and as an integral part of SIPA Spa's sustainability project.

## SUSTAINABLE DEVELOPMENT GOALS

The principles underlying the Environmental Policy and the resulting goals are developed taking into consideration the context in which the company operates and its stakeholders' needs, and take the form of:

- Reduction of pollutant emissions into air, water and soil, waste production and noise and light emissions in the environment;
- Limitation of use of natural resources, preferring renewable resources wherever possible;

- Greater use of recycled and recyclable materials wherever possible;
- Maintenance and implementation of separate waste collection;
- Optimisation of production processes to minimise processing waste;
- Development and application of new technologies aimed at saving energy by promoting sustainable use of resources;
- Promotion of awareness and education of human resources in the area of environment respect;
- Guaranteeing sustainable environmental development by achieving a balance between corporate economic growth on the one hand and environmental protection on the other, taking the needs of the environment into account in all the company's actions;
- Guaranteeing the availability of the resources necessary for the maintenance and development of the Environmental Management System.

Each of our employees is encouraged to collaborate in the development of the Environmental Management System and to pay the utmost attention to environmental issues in order to achieve the company's goals for environmental protection.
